PLATINUM

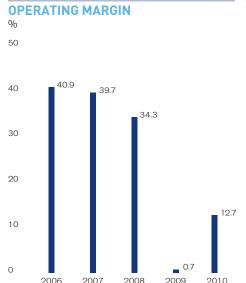

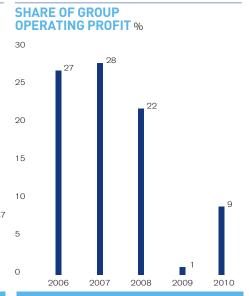

Our subsidiary, Anglo Platinum, is the world's largest primary producer of platinum, accounting for about 40% of world supply. Anglo American's platinum operations exploit the world's richest reserve of PGMs, known as the Bushveld Complex, which contains the PGM-bearing Merensky, UG2 and Platreef ores.

#### **OUR PLATINUM OPERATIONS**

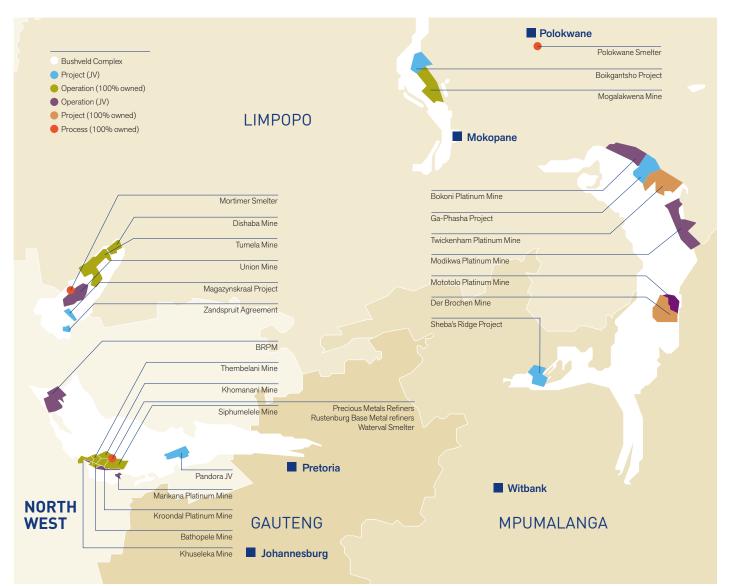

Our Platinum business, based in South Africa, is the world's leading primary producer of platinum, accounting for around 40% of global output. Platinum mines, processes and refines the entire range of platinum group metals (PGMs): platinum, palladium, rhodium, ruthenium, iridium and osmium. Base metals such as nickel, copper and cobalt sulphate are important secondary products and are significant contributors to earnings.

Platinum's operations exploit the world's richest reserve of PGMs, known as the Bushveld Complex, which contains PGM-bearing Merensky, UG2 and Platreef ores. The company's access to an excellent portfolio of Ore Reserves ensures it is well placed to be the world's major platinum producer for many years to come.

Platinum wholly owns 10 mining operations currently in production, a tailings re-treatment facility, three smelters, a base metals refinery and a precious metals refinery. Each mine operates its own concentrator facilities, with smelting and refining of the output being undertaken at Rustenburg Platinum Mines' (RPM) metallurgical facilities.

Platinum's 100% owned mining operations now consist of the five mines at Rustenburg Section – Khomanani, Bathopele, Siphumelele, Thembelani and Khuseleka; Amandelbult Section's two mines, Tumela and Dishaba, as well as Mogalakwena and Twickenham mines and the new Unki mine in Zimbabwe. Union Mine is 85% held, with a black economic empowerment (BEE) partner, the Bakgatla-Ba-Kgafela traditional community, holding the remainder.

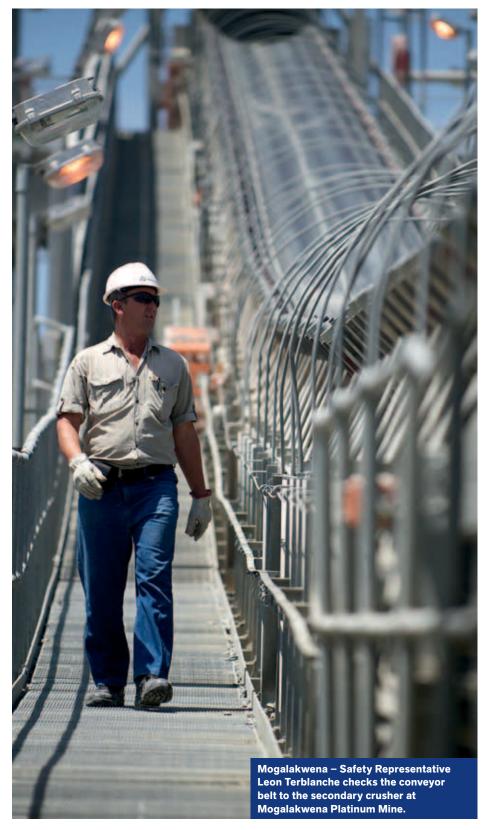

Other Mining Oth and Industrial info

Platinum also has 50:50 joint ventures with a BEE consortium, led by African Rainbow Minerals, at Modikwa platinum mine; and with XK Platinum Partnership in respect of the Mototolo mine. In addition, Platinum has 50:50 pooling and sharing agreements with Aquarius Platinum covering the shallow reserves of the Kroondal and Marikana mines and portions of the reserves at Thembelani and Khuseleka. Platinum is in partnership with Royal Bafokeng Resources, and has a 33% shareholding in the combined Bafokeng-Rasimone platinum mine (BRPM) and Styldrift properties.

During 2010, the listing of Royal Bafokeng Platinum (RB Plat) was completed successfully. Platinum, through RPM, holds 12.6% of RB Plats' issued share capital. The listing was a landmark transaction marking the fulfilment of Platinum's commitment towards facilitating the creation of an independently controlled and managed, black-empowered PGM producer.

# **INDUSTRY OVERVIEW**

#### **INDUSTRY OVERVIEW**

PGMs have a wide range of industrial and high technology applications. Demand for platinum is driven primarily by its use in autocatalysts to control emissions from both gasoline and diesel engine vehicles, and in jewellery. These uses are responsible for 70% of total net platinum consumption. Platinum, however, also has a large range of other applications, predominantly in the chemical, electrical, medical, glass and petroleum industries.

The platinum jewellery market requires constant promotion and development. Platinum is the major funder and supporter of the Platinum Guild International (PGI), which plays a key role in encouraging demand for platinum and in establishing new platinum jewellery markets. Since 2000, China has been the leading platinum jewellery market, followed by Europe, Japan and North America.

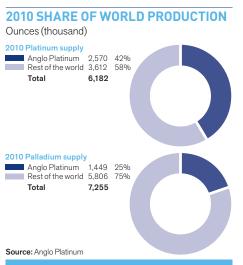

Industrial applications for platinum are driven by technology and, especially in the case of autocatalysts, by legislation. With the rapid spread of exhaust emissions legislation, more than 94% of new vehicles now have autocatalysts fitted. The intensifying stringency of emissions legislation will drive growth in PGM demand.

Palladium's principal application, accounting for about 45% of demand, is in autocatalysts. The metal is also used in electronic components, dental alloys and, more recently, has become an emerging jewellery metal in markets such as China. Palladium demand is expected to continue to increase in 2011, particularly given the volume of gasoline vehicles produced by emerging market countries such as China, India and Brazil.

The PGM markets had a strong year in 2010, with significant recovery in demand from the autocatalyst and industrial markets, healthy demand from the jewellery sector and increasing investor interest in the platinum and palladium markets, primarily via Exchange Traded Funds (ETFs). Supply increases from the industry were largely delivered and, as a result, the platinum and palladium markets remained essentially in balance. The rhodium market saw a reduced surplus due to improved autocatalyst demand.

## STRATEGY AND GROWTH

Our objective is to maintain Platinum's position as the leading primary producer of platinum. We are doing so in two principal ways: first, through managing costs as a priority, by improving productivity, increasing efficiency and through the effective management of supply chain and procurement costs; secondly, through continuing to develop the market for PGMs and to expand production into that growth opportunity.

We expect the cost improvement trend achieved since 2008 at Platinum to be sustained during 2011, with unit cash costs per equivalent refined platinum ounce kept at around R11,700, the same level as in 2010. Productivity is expected to increase from 7.06 m² to an average of 7.3 m² for 2011.

Platinum's strategic plan, based on our current view that the market will be adequately supplied, should improve the company's cost position, taking it from the upper half to the lower half of the cost curve. Platinum is steadily improving the reliability of its production capability and entrenching cost

management throughout the business as a long term and sustainable culture. This will help ensure that Platinum is well positioned to extract optimal value from its assets as the market recovery continues. At the same time, there will continue to be an unremitting focus on safety as the company pursues its zero harm objective.

Project capital spend is now directly related to our long term ounce requirements. This has led to a reduction in the rate of spend, and all previously deferred projects have been reviewed and are now incorporated into our growth for value strategy. Platinum aims to spend R8 billion (\$1.16 billion) of capital, excluding capitalised interest.

Platinum is involved in developing mining activity for PGMs on the Great Dyke of Zimbabwe, the second largest repository of platinum after the Bushveld Complex. Unki mine was commissioned in 2010, and will ramp up to design capacity in 2013. We are focusing exploration work in Zimbabwe on new projects in the Great Dyke as well as establishing extensions

to the Unki resource base for potential future projects.

#### **Projects**

Capital expenditure amounted to \$1,011 million, a 12% decrease, with \$511 million spent on projects and \$500 million on stay-in-business capital.

The concentrator at the Unki project in Zimbabwe was formally commissioned during the fourth quarter of 2010. First production of refined metal was achieved during the first quarter of 2011. At full capacity, Unki will supply 70 kozpa of refined platinum, a run rate expected to be reached in 2013.

The Mogalakwena North project reached steady state during the third quarter of 2010 (annual steady state 2011) and through optimisation projects will continuously produce 600 ktpm of ore.

Dishaba East Upper project implementation commenced in 2007 and is on schedule to reach steady state production of 100,000 platinum ounces per annum by 2012.

# PROJECT PIPELINE -**KEY PROJECTS**

#### KHUSELEKA (FORMERLY TOWNLANDS) ORE REPLACEMENT

#### Overall capex: \$187m

### Country

South Africa

#### **Ownership**

100% Anglo Platinum

#### Replacement production

101,000 oz per annum

#### **Full project capex**

\$187m

#### **Full production**

Q4 2015

The Khuseleka ore replacement project aims to replenish diminishing Merensky Reef output and to supplement existing UG2 Reef output at that shaft by extending the existing decline shaft. The associated project infrastructure includes three ventilation shafts, which were completed in 2010. This project will be completed in 2014.

#### THEMBALANI (FORMERLY PAARDEKRAAL)

#### Country

South Africa

#### **Ownership**

100% Anglo Platinum

#### Replacement production

115,000 oz per annum

#### **Full project capex**

\$316m

#### **Full production**

04 2020

The Thembelani No 2 shaft project is designed to restore Merensky Reef output at Thembelani, in line with the overall strategy for the Rustenburg mining right area to maximise Merensky production where possible. The UG2 horizon will be mined to fill available shaft capacity, but not at the expense of Merensky production. The medium-term Rustenburg mines production profile is predicated on a series of phased decline extension projects to existing shafts. Between 2016 and 2026, the production profile will be maintained by using either two or three intermediate vertical shafts. The Thembelani No 2 shaft is the first of these vertical shafts. The ventilation shaft has reached its bottom station (1,058 metres below collar) and infrastructure to hoist rock during initial Ore Reserve development has been established to do lateral development. The men-and-materials shaft, 28 level stations (890 metres bellow collar) and 32 level stations are complete. Bulk infrastructure, such as the refrigeration plant, consumer substation, 11-kilovolt substation and 33-kilovolt yard has been completed and commissioned. This project is currently behind schedule and the re-statement of the project is in progress; steady state production from this shaft will be reached during 2020.

#### **DISHABA (FORMERLY AMANDELBULT) EAST UPPER UG2**

#### Country

South Africa

#### Ownership

100% Anglo Platinum

#### **Incremental production**

100,000 oz per annum

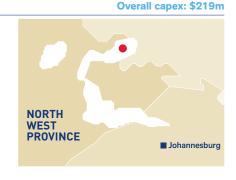

#### **Full project capex**

\$219m

#### **Full production**

Q42012

The East Upper UG2 project utilises mined out Merensky reef infrastructure at Dishaba No 2 shaft to access UG2 reserves. Project implementation commenced in 2007 and is on schedule to reach steady-state production of 100,000 platinum ounces per annum during 2012.

#### **MOGALAKWENA NORTH**

#### Country

South Africa

#### **Ownership**

100% Anglo Platinum

### Incremental and

**replacement production** 350-400,000 oz per annum

#### Full project capex

\$822m

**Full production** 

2010

The Mogalakwena North project, aimed at increasing milling capacity at the mine, was approved in 2006. During 2010, the Concentrator was commissioned and the associated tailings facilities were completed. This project has entailed the relocation of a number of villages and the resettlement of 892 families. A Government task team is assisting Anglo Platinum Limited with the relocation of the remaining 64 families, who remain unwilling to relocate.

#### TWICKENHAM Overall capex: \$1,259m

#### Country

South Africa

#### **Ownership**

100% Anglo Platinum

#### **Incremental production**

190,000 oz per annum

#### **Full project capex**

\$1.259m

#### **Full production**

2019

The Twickenham Platinum Mine project has undergone a revalidation process due to significant changes in the economic environment, and in particular the sustained strength of the South African Rand against the US dollar. This project remains, however, an integral part of Anglo Platinum's strategy in expanding into the Eastern Limb.

#### **BASE METALS REFINERY EXPANSION**

#### Country

South Africa

#### Ownership

100% Anglo Platinum

#### **Production**

#### Full project capex

\$360m

#### Full production

Q1 2012

The BMR expansion project began in the second half of 2007, following Board approval. In Dec 2008, the Board took the decision to defer the project for a period of one year. The project restarted in January 2010, with anticipated completion by the end of the second quarter of 2011. Overall completion stands at 96%. The first area, (consisting of copper pressure leach autoclave, and selenium and tellurium removal), has been hot commissioned and is in production. Construction of the second half of new nickel tank house is complete. Filter press No.1 and 2 in the sulphur removal section are complete, and the first 6 cells within the nickelic production section are complete and have been on line since 31 March 2011. The next challenge in the handover process will be the availability of plant and equipment from Operations to complete tie-in's in preparation for the upcoming chemical change over scheduled for May 2011.

#### **UNKI PLATINUM MINE**

\$459m

#### **Full production**

Q4 2013

Unki is situated near Gweru, on Zimbabwe's Great Dyke. Unki is planned as a 120,000 tonne per month operation, with potential for further expansion. The mine uses a mechanised, trackless bord-and-pillar mining method. Concentrate produced at Unki Mine will be transported to the Polokwane smelter by road. Two declines have been designed, one for personnel and materials and the other for ore conveyance. Both declines have been developed on-reef, with strike belts from the seven production sections transferring ore directly onto the main decline conveyor.

#### PLATINUM GROUP METALS

#### estimates as at 31 December 2010

#### **PLATINUM**

The Ore Reserve and Mineral Resource estimates were compiled in compliance with The South African Code for the Reporting of Exploration Results, Mineral Resources and Mineral Reserves, (The SAMREC Code, 2007). Operations and Projects outside South Africa were compiled in accordance with the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (The JORC Code, 2004) as a minimum standard. Details of the individual operations appear in the Anglo Platinum Annual Report. Merensky Reef and UG2 Reef Mineral Resources are reported over an economic and mineable cut appropriate to the specific reef. The figures reported represent 100% of the Mineral Resources and Ore Reserves attributable to Anglo Platinum Limited unless otherwise noted. Rounding of figures may cause computational discrepancies.

Anglo American plc's interest in Anglo Platinum is 79.7%.

Tonnage: Quoted as dry metric tonnes

 $<sup>\</sup>label{eq:Grade: 4EPGE} \textbf{Grade: 4EPGE} is the sum of platinum, palladium, rhodium and gold grades in grammes per tonne (g/t). \\ \textbf{Contained Metal: Contained Metal is presented in metric tonnes and million troy ounces (Moz).}$ 

Merensky Reef and UG2 Reef: (a) The BEE transaction announced with Royal Bafokeng Platinum Ltd. was finalised during 2010 resulting in a change of the attributable and reportable Ore Reserves for Bafokeng Rasimone Platinum Mine (BRPM). Anglo Platinum's attributable percentage decreased from 50% to 33%, equivalent to a decrease of 23.2Mt (-3.1Moz). (b) During 2008, RPM entered into agreement to sell its interest in the Western Bushveld Joint Venture (WBJV) to Wesizwe. The suspensive conditions of this agreement have been fulfilled resulting in the reporting of 0% attributable percentage of WBJV, equivalent to a decrease of 10.9Mt (-1.6Moz).

Merensky Reef and UG2 Reef: The pay limits built into the basic mining equation are directly linked to the 2011 Business plan. The pay limit is based on Cost 4 which consists of 'Direct Cash Cost' (on and off mine), 'Other indirect Costs' and 'Stay in Business Capital' (on and off mine). The range is a function of various factors including depth of the ore body, geological complexity, infrastructure and economic parameters.

Merensky Reef: The reserve pay-limit varies across all operations between 2.1g/t and 4.4g/t (4E PGE). The decrease is mainly attributable to the BEE transaction announced (-20.1Mt, -3.0Moz) and

re-allocation of previously reported Ore Reserves back to Mineral Resources due to a change in the mine design and scheduling mainly at Tumela and Dishaba Mine (-11.1Mt, -2.4Moz). The Proved Ore Reserve tonnage increased mainly due to an increase in confidence at BRPM's Styldrift area.

UG2 Reef: The reserve pay-limit varies across all operations between 2.0g/t and 3.9g/t (4E PGE). The decrease is mainly attributable due to re-allocation of previously reported Ore Reserves back to Mineral Resources due to a change in the mine design and scheduling mainly at Tumela and Dishaba Mine (-29.7Mt -6.0Moz) and due to the BEE transaction announced (-14.0Mt, -1.7Moz). However the UG2 Ore Reserves were influenced positively due to increased confidence mainly at BRPM and Union Mine (+39.6Mt, +5.2Moz) which resulted in a significant amount of Mineral Resources being

Platreef: The total Ore Reserves increased significantly due to a change in the economic assumptions for Mogalakwena North and Central where the 4E pay limit grade has been decreased from 1.7g/t to 1.0g/t due to technological advances in the processing plant and due to a change in the economic parameters. For Sandsloot and Zwartfontein South the pay limit grade is unchanged at 1.7g/t. It must

be noted that a 4.5% mining loss has been applied to the total Ore Reserves. The modifying factors account for a decrease of 28.2Mt (-1.9Moz).

Platreef stockpiles: Mined ore being held for long-term future treatment. These are reported separately as Proved Ore Reserves and aggregated into the summation tabulations. Previously reported Proved primary ore stockpiles containing oxidised and calcsilicate material above 3g/t are excluded from the Ore Reserve stockpile (-6.1Mt, -0.7Moz) and included under the Mineral Resources Alternative units – Total: Tonnage in million short tons (Mton) and associated grade in troy ounces per short ton (oz/ton) for 2010 is:

Total - 1.520.8 Mton (2009: 1.449.6 Mton)

Total – 0.109 oz/ton (2009: 0.118 oz/ton)

Tailings: Operating tailings dams for current mining operations cannot be geologically assessed and therefore are not reported as part of the Ore Reserves. At Rustenburg Mine a dormant dam has been

rainings. Operating fainings admis for content mining operations cannot be geologically assessed and uneque to the season of the Size of the Season of the S interest in Southridge Limited. Due to increased confidence based on new information and on underground mining exposure the Proved Ore Reserves tonnage increased significantly

Due to the uncertainty that may be attached to some Inferred Mineral Resources, it cannot be assumed that all or part of an Inferred Mineral Resource will necessarily be upgraded to an Indicated or Measured Resource after continued exploration.

- Tonnage: Quoted as dry metric tonnes.
- Grade: 4E PGE is the sum of platinum, palladium, rhodium and gold grades in grammes per tonne (g/t).
- 3E PGE is the sum of platinum, palladium and gold grades in grammes per tonne (g/t). Contained Metal: Contained Metal is presented in metric tonnes and million troy ounces (Moz)
- Merensky Reef and UG2 Reef: (a) During 2009 the attributable interest in the Magazynskraal 3JQ Project (BEE transaction announced with Bakgatla-Ba-Kgafela and Pallinghurst) decreased from 74% to 20%. 74% attributable to this project was included in the 2009 Annual Report. This has been adjusted for in the current Annual Report equivalent to a decrease of 59.6Mt (-10.5 Moz). (b) The BEE transaction announced with Royal Bafokeng Platinum Ltd. was finalised during 2010 resulting in a change of the attributable and reportable Ore Reserves for Bafokeng Rasimone Platinum Mine (BRPM). Anglo Platinum's attributable percentage decreased from 50% to 33%, equivalent to a decrease of 54.2Mt (-10.3 Moz). (c) During 2008, RPM entered into agreement to sell its interest in the Western Bushveld Joint Venture (WBJV) to Wesizwe. The suspensive conditions of this agreement have been fulfilled during the first half of 2010. Rustenburg Platinum Mines Ltd (RPM) received Wesizwe shares as part settlement of the purchase consideration. This results in the reporting of 26.6% attributable tonnage in the Wesizwe areas (+27.0Mt, +4.6 Moz). The previously reported Mineral Resources for WBJV are therefore excluded from the 2010 figures (-16.3Mt, -2.8 Moz).

  The Mineral Resources are quoted over a practical minimum mining cut suitable for the deposit known as the Resource Cut. Previously Resources were declared over a minimum mineable width of

80cm, but investigations have confirmed that this is not viable and the minimum width has been increased to 90cm. The Resource Cut includes geotechnical aspects in the hanging wall or footwall of the reef. Chromitite stringers above or below the UG2 main seam or any 'geotechnical weak zones' are included in the Resource Cut. The minimum beam height regarding the geotechnical aspect depends on the mining method.

Anglo Platinum takes cognisance of cut-off grades, derived from information on pay limits in the mining operations. No Mineral Resources are excluded from the 2010 declaration relative to 2009 as a

result of the cut-off grade consideration. The delineation of the Mineral Resources that meet the requirements of reasonable expectation of eventual economic extraction has been defined using the modifying factors as defined in the SAMREC code. These include but are not limited to mineability, geological complexity, processability and economic factors such as Cost 4 pay limits. Cost 4 pay limit consists of 'Direct Cash Cost' (on and off mine), 'Other indirect Costs' and 'Stay in Business Capital' (on and off mine). The minimum resource grades per reef and per operation are in all instances greater than the Cost 4 pay limit.

- Merensky Reef: (a) The decrease in Mineral Resources is mainly attributable to the change of the attributable percentage decrease due to the finalisation of the BEE transactions (-51.3Mt, -10.9Moz) and (b) at Union due to new information where certain areas have been transferred from Mineral Resources to Mineral Deposit (-8.0Mt, -1.7Moz). The decreases were in part offset by the increase in Mineral Resources due to new information mainly from Bokoni, Ga-Phasha and Der Brochen (+37.7Mt, +8.3Moz) and due to acquisition from Wesizwe (+12.0Mt, +2.4Moz).

  UG2 Reef: The decrease in total Mineral Resources is mainly due to the change of the attributable percentage decrease following the finalisation of the BEE transactions (-78.8Mt, -12.6Moz).
- Platreef: A 1.0g/t (4E PGE) cut-off has been used to define Mineral Resources. The decrease is due to a higher percentage decrease is due to a higher percentage of Mineral Resources being converted to Ore Reserves as a consequence of the decrease in the 4E pay limit grade from 1.7g/t to 1.0g/t at Mogalakwena North and Central. Since previously reported Proved primary ore stockpiles containing oxidised and calcisilicate material above 3g/t are currently not planned to be processed, they are excluded from the Ore Reserve stockpile and included under the Measured Mineral Resources (+6.1Mt, +0.7Moz).

  Alternative units Measured and Indicated: Tonnage in million short tons (Mton) and associated grade in troy ounces per short ton (oz/ton) for 2010 is:

Measured and Indicated – 2,542.4 Mton (2009: 2,652.6 Mton) Measured and Indicated – 0.120 oz/ton (2009: 0.115 oz/ton)

- Tailings: Operating tailings dams for current mining operations cannot be geologically assessed and therefore are not reported as part of the Mineral Resources. Tailings dams resources are reported separately as Mineral Resources but are not aggregated to the global Mineral Resource summation. At Rustenburg Mine a dormant dam has been evaluated and the tailings form part of the Mineral Resource statement. At Union the previously reported tailings dams are reactivated and as a consequence no Mineral Resources are stated.

  Main Sulphide Zone: The Main Sulphide Zone is the orebody mined at Unki Mine. The Mineral Resources for the Main Sulphide Zone relate to the Unki East and West mines only. Anglo Platinum owns an
- effective 100% interest in Southridge Limited. Due to new information, which comprises of a significant amount of surface drilling and a re-interpretation of the geological structure, the spatial extent of the Unki project was reduced in the South and North to take cognisance of natural boundaries determined by geological structures. Previously reported Mineral Resources lying beyond these structures which were included under the Unki Project in 2009 will be reported as Unki South pending further evaluation in 2011.

  (1) Anooraq-Anglo Platinum Boikgantsho: Anglo Platinum holds an attributable interest of 49%. A cut-off of US\$20.00/t gross metal value was applied for resource definition.

  (2) Sheba's Ridge: Anglo Platinum holds an attributable 35% of the JV area. A cut-off of US\$10.50/t total revenue contribution from the constituent metal was used.

  (3) River Valley: Anglo Platinum holds an attributable interest of 50%. A cut-off of 0.7g/t (platinum plus palladium) was applied for resource definition.

- Pedra Branca: Anglo Platinum holds an attributable interest of 51%. A cut-off of 0.7g/t (3E PGE) was applied for resource definition.

The following Operations and Projects contributed to the combined 2010 Ore Reserve and Mineral Resource estimates stated per reef (excluding Other Projects):

Operations:	%	LOM
Bafokeng Rasimone Platinum Mine (BRPM) - MR/UG2	33%	28
Bathopele Mine – UG2	100%	17
Bokoni Platinum Mine – MR/UG2	49%	27
Dishaba Mine – MR/UG2	100%	30+
Khomanani Mine – MR/UG2	100%	16
Khuseleka Mine – MR/UG2	100%	25
Kroondal Platinum Mine – UG2	50%	9
Marikana Platinum Mine – UG2	50%	9
Modikwa Platinum Mine – MR/UG2	50%	20
Mogalakwena Mine - PR	100%	30+
Mototolo Platinum Mine – UG2	50%	5*
Pandora – UG2	42.5%	13
Siphumelele Mine – MR/UG2	100%	30+
Thembelani Mine – MR/UG2	100%	17
Tumela Mine – MR/UG2	100%	30+
Twickenham Platinum Mine – MR/UG2	100%	30+
Union Mine – MR/UG2	85%	19
Unki Mine – MSZ	100%	30
Projects:	%	
Der Brochen Project – MR/UG2	100%	
Ga-Phasha PGM Project – MR/UG2	49%	
Magazynskraal 3 JQ - MR/UG2	20%	

Other Exploration Projects (portions of Driekop/Rustenburg) - MR/UG2 37.5% to 100% Rustenburg - Non Mine Projects - MR/UG2 100% 26.6% Wesizwe - MR/UG2

MR = Merensky Reef, UG2 = UG2 Reef, PR = Platreef, MSZ = Main Sulphide Zone;

% = Anglo Platinum Limited attributable interest;

LOM = Life of Mine in years based on scheduled Ore Reserves considering the combined MR and UG2 production where applicable;

Only 5 years of Ore Réserves are declared as per Xstrata policy

Audits related to the generation of the Ore Reserve and Mineral Resource statements were carried out by independent consultants during 2010 at the following operations: BRPM, Bathopele, Dishaba, Mogalakwena, Siphumelele and Thembelani.
