

NEWS RELEASE

29 January 2014

Anglo American plc
Production Report for the fourth quarter ended 31 December 2013

Overview

- Kumba Iron Ore production increased by 25% to 11.3 Mt following the strike in Q4 2012
- Export metallurgical coal production increased by 3% to 4.7 Mt due to sustained longwall productivity improvements
- Export thermal coal production increased by 8% to 7.9 Mt. Export thermal coal production from South Africa decreased by 1% to 4.6 Mt. Cerrejón production increased by 24% to 3.3 Mt, maintaining the strong recovery following the strike in Q1 2013
- Copper production⁽¹⁾ increased by 24% to a record 214,400 tonnes, driven by continued strong performance at Los Bronces, and higher grades at Collahuasi
- Nickel⁽²⁾ production increased by 38% to 10,200 tonnes. Higher production at Barro Alto was driven by improved operational stability of the furnaces
- Niobium production increased by 20% to 1,200 tonnes, reflecting operational improvements at the plants and higher grades
- Fertiliser production increased 2% due to increased plant availability
- Platinum equivalent refined production increased by 25% to 520,300 ounces as a result of an increase in production from Mogalakwena, and the normalisation of production at Rustenburg (Bathopele, Siphumelele and Thembelani), Amandelbult (Dishaba and Tumela) and Union mines that were impacted by the illegal industrial action in 2012
- The restructuring of Platinum has commenced with baseline production of 2.2 2.4 million ounces per annum, with 250,000 annualised low margin, high cost, and unprofitable ounces no longer in production
- Diamond production increased by 13% to 9.1 million carats, primarily due to increased output from Jwaneng following the recovery after the slope failure in June 2012, together with higher grades at Orapa and Venetia

The Production Report for the fourth quarter ended 31 December 2013 is unaudited. Preliminary Results for the full year to 31 December 2013 will be announced on 14 February 2014.

IRON ORE AND MANGANESE

Iron Ore and Manga	inese	Q4 2013	Q4 2012	Q4 2013 vs. Q4 2012	Q3 2013	Q4 2013 vs. Q3 2013	FY 2013	FY 2012	FY 2013 vs. FY 2012
Iron ore	000 t	11,286	9,013	25%	9,475	19%	42,373	43,065	(2)%
Manganese ore	000 t	846	847	0%	788	8%	3,302	3,348	(1)%
Manganese alloy	000 t	66	61	8%	55	21%	251	198	26%

Iron Ore – Production from Kumba Iron Ore increased by 25% to 11.3 Mt, owing to strike action impacting production in Q4 2012.

Production at Sishen mine increased by 39% to 8.4 Mt as production recovered following the impact of the unprotected strike in Q4 2012 and by 31% compared to the previous quarter owing to the section 54 regulatory safety stoppages in August 2013. For the full year, production decreased by 8% to 30.9 Mt. The Sishen pit remains constrained by waste material, which reduces the availability of material supplied to the processing plants. A production recovery plan to address the current pit constraints and a longer term operational optimisation strategy are being implemented.

Production at Kolomela decreased marginally by 2% to 2.7 Mt, despite a five-day planned maintenance stoppage in December. Production at Kolomela for the full year increased by 26% to 10.8 Mt. Technical studies have confirmed the mine's capacity to sustain production at 10 Mtpa for the life of mine, 1 Mtpa above its original design capacity.

Export sales volumes increased by 6% to 9.5 Mt, due to the strikes in 2012 impacting prior year sales volumes. Finished product stockpile levels amounted to 2.8 Mt, a decrease of 24%.

Manganese Ore – Production was flat at 846,000 tonnes with improved performance at Hotazel (South Africa) offsetting lower recoveries at GEMCO (Australia).

Manganese Alloy – Production increased by 8% to 66,200 tonnes due to the temporary cessation of production at TEMCO in 2012.

METALLURGICAL COAL

Metallurgical Coal		Q4 2013	Q4 2012	Q4 2013 vs. Q4 2012	Q3 2013	Q4 2013 vs. Q3 2013	FY 2013	FY 2012	FY 2013 vs. FY 2012
Metallurgical – Export	000 t	4,733	4,580	3%	4,912	(4)%	18,656	17,664	6%
Thermal – Export	000 t	1,585	1,689	(6)%	1,672	(5)%	6,264	6,046	4%
Thermal – Domestic	000 t	1,689	2,025	(17)%	1,752	(4)%	6,239	6,925	(10)%

Metallurgical Coal – Export metallurgical coal production increased by 3% to 4.7 Mt, with a record performance of 18.7 Mt for the full year. Full-year production records were achieved at Moranbah and Foxleigh in Australia, and Peace River Coal in Canada.

Production at the underground operations increased by 5%, despite an additional planned longwall move at Moranbah. Full year production increased by 30% to 7.3 Mt at the underground operations following a significant improvement in longwall productivity over the past 18 months.

The strategic focus on premium priced products and underground operational improvements had a favourable impact on the product mix, with the ratio of hard coking coal (HCC) to pulverised coal injection (PCI) increasing by 3% to 70% in 2013.

Thermal coal production decreased as a result of the impact of floods in the first half of 2013, most notably at Callide.

THERMAL COAL

Thermal Coal		Q4 2013	Q4 2012	Q4 2013 vs. Q4 2012	Q3 2013	Q4 2013 vs. Q3 2013	FY 2013	FY 2012	FY 2013 vs. FY 2012
South Africa									
Thermal – Export	000 t	4,602	4,659	(1)%	4,505	2%	17,031	17,132	(1)%
Thermal – Domestic (Eskom)	000 t	7,618	8,561	(11)%	9,053	(16)%	33,567	33,706	-
Thermal – Domestic (Non-Eskom)	000 t	1,234	1,595	(23)%	1,665	(26)%	5,992	6,293	(5)%
Colombia									
Thermal – Export	000 t	3,290	2,662	24%	3,185	3%	11,002	11,549	(5)%

Thermal Coal – Total export thermal coal production increased by 8% to 7.9 Mt.

Export production from South Africa decreased by 1% to 4.6 Mt. Domestic thermal coal production for Eskom decreased by 11% to 7.6 Mt, due to wet weather interruptions, a longwall stoppage at New Denmark and lower demand from Eskom from New Vaal. Other domestic thermal coal production (non-Eskom) decreased by 23% to 1.2 Mt because of wet weather interruptions at Isibonelo.

Cerrejón's production increased by 24% to 3.3 Mt as production continued to ramp up, recovering volumes lost as a result of the strike in Q1 2013.

COPPER

Copper		Q4 2013	Q4 2012	Q4 2013 vs. Q4 2012	Q3 2013	Q4 2013 vs. Q3 2013	FY 2013	FY 2012	FY 2013 vs. FY 2012
Copper	t	214,400	172,900	24%	207,100	4%	774,700	659,700	17%

Copper – Copper production increased by 24% to a quarterly record of 214,400 tonnes.

Production at Los Bronces increased by 16% to 110,000 tonnes owing to continued strong throughput performance. Reduced mine congestion and de-bottlenecking at the primary crushers has improved continuity of ore supply and throughput at both processing plants. Improvements implemented in the Confluencia milling and flotation processes have also resulted in higher recoveries.

Production from Collahuasi doubled to 64,800 tonnes (attributable share). The significant increase reflects the lower grades, a ball mill breakdown and SAG 3 mill underperformance in 2012. Following the SAG 3 stator motor replacement and repowering in Q2 2013, mill throughput continues to increase, with performance for the quarter in line with expected capacity. Production also benefited from higher than planned grades.

Production at El Soldado decreased by 17% to 12,600 tonnes, due to a lack of ore supply from the mine. As previously advised, a major fault intersection has been encountered which has impacted ore availability and the development of the next phase in the pit. The decrease in production has been partially offset by the processing of slag from the nearby Chagres smelter from October 2013.

At the end of 2013, Anglo American had 179,100 tonnes of copper provisionally priced at 326 c/lb. Provisional pricing of copper sales resulted in a negative operating profit adjustment of \$92 million for 2013, versus a positive operating profit adjustment of \$47 million in the prior year.

NICKEL

Nickel		Q4 2013	Q4 2012	Q4 2013 vs. Q4 2012	Q3 2013	Q4 2013 vs. Q3 2013	FY 2013	FY 2012	FY 2013 vs. FY 2012
Nickel	t	10,200	7,400	38%	9,500	7%	34,400	39,300	(12)%

Nickel – Production increased by 38% to 10,200 tonnes, reflecting progress at Barro Alto to improve operational stability, despite the need for furnace rebuilds. Ore smelted averaged 82% of nominal capacity during the quarter, compared to 49% in 2012. As previously announced, the two Barro Alto furnaces are being rebuilt, the first starting in late 2014 and the second in late 2015. Design capacity is expected to be achieved in 2016.

Production at Codemin decreased by 2% as a result of a planned decline in grade.

NIOBIUM & PHOSPHATES

Niobium & Phosphate	es	Q4 2013	Q4 2012	Q4 2013 vs. Q4 2012	Q3 2013	Q4 2013 vs. Q3 2013	FY 2013	FY 2012	FY 2013 vs. FY 2012
Niobium									
Production	t	1,200	1,000	20%	1,100	9%	4,500	4,400	2%
Phosphates									
Concentrate	t	353,400	350,200	1%	355,000	-	1,406,300	1,357,100	4%
Phosphoric Acid	t	78,000	82,100	(5)%	79,500	(2)%	317,100	299,800	6%
Fertiliser	t	299,000	294,200	2%	326,300	(8)%	1,199,000	1,127,600	6%
DCP	t	38,700	38,200	1%	43,100	(10)%	159,600	150,000	6%

Niobium – Production increased by 20% due to operational improvements at Boa Vista mine and its tailings plants and higher niobium pentoxide grade contained in phosphate mine tailings, more than offsetting a decline in ore quality at the mine.

Phosphates – Fertiliser production increased by 2% due to increased plant availability, enabling enhanced performance at the acidulation and granulation plants. Phosphoric acid production decreased by 5% owing to the timing of the annual planned maintenance shutdown in Cubatão, together with an unplanned maintenance stoppage in Catalão.

PLATINUM

Platinum		Q4 2013	Q4 2012	Q4 2013 vs. Q4 2012	Q3 2013	Q4 2013 vs. Q3 2013	FY 2013	FY 2012	FY 2013 vs. FY 2012
Refined									
Platinum	000 oz	692	704	(2)%	666	4%	2,380	2,379	-
Palladium	000 oz	428	413	4%	369	16%	1,381	1,396	(1)%
Rhodium	000 oz	84	91	(8)%	85	(2)%	295	311	(5)%
Copper ⁽¹⁾ - Refined	t	1,800	2,500	(28)%	2,600	(31)%	8,300	11,400	(27)%
Copper ⁽¹⁾ - Matte	t	1,400	-	-	300	367%	5,800	-	-

Nickel ⁽¹⁾ - Matte	t	100	-	-	300	67%	5,800	-	-
Gold	000 oz	27	19	44%	34	(21)%	100	105	(5)%
Equivalent ⁽²⁾									
Platinum	000 oz	520	416	25%	623	(16)%	2,320	2,219	5%

Nickel and copper refined through third parties is shown as production of nickel matte and copper matte. Nickel and copper matte, per the table, reflects (1) matte sold to a third party in Q4 2013 from 2012 and 2013 production stockpile Equivalent refined is the mines' production and purchases of metal in concentrate, secondary metals and other metals converted to equivalent refined

Platinum – Equivalent refined platinum production increased by 25% to 520,300 ounces. Production from own operations and the Western Limb Tailings Retreatment was 311,000 ounces, a 35% increase compared to 2012, mainly attributable to the illegal industrial action that impacted Q4 2012. Production from joint ventures and associates, including both own mine and purchased production, increased by 14% to 197,700 ounces.

Mogalakwena's production increased by 24% as a result of higher throughput at the concentrator and higher recoveries. In addition, material was processed on a toll basis in 2013 at a 3rd party concentrator.

Rustenburg, Amandelbult and Union increased production in aggregate by 38% as they recovered from the effect of illegal industrial action in Q4 2012. Further industrial action was experienced at several Platinum operations in Q4 2013 (between 27 September 2013 and 10 October 2013); approximately 44,000 ounces of platinum production were lost as a result.

Production at Rustenburg decreased by 41% as a result of Khomanani mine, and Khuseleka 2 shaft having been put into long term care and maintenance since August 2013, in line with the proposed restructuring plans. The resources from these mines have now been integrated into the surrounding operations.

Production at the Tumela and Dishaba mines was adversely affected by shortages of production crews and supervisors, resulting from the extended Section 189 restructuring process. The redeployment of labour programme has been concluded and productivity improvements are expected in 2014.

Refined platinum production was marginally lower at 692,100 ounces, with total production for the year at 2.4 million ounces.

Palladium, Rhodium and Nickel - Refined production of palladium increased by 4% and rhodium decreased by 8% as a result of a different source mix from operations as well as different pipeline processing times for each metal. Nickel production saw a 33% increase as plant capacity increased following the resolution of technical challenges in the new nickel tank house and as ramp up continues.

production using Anglo American Platinum Limited's standard smelting and refining recoveries

DIAMONDS

Diamonds		Q4 2013	Q4 2012	Q4 2013 vs. Q4 2012	Q3 2013	Q4 2013 vs. Q3 2013	FY 2013	FY 2012	FY 2013 vs. FY 2012
Diamonds	000 carats	9,132	8,051	13%	7,732	18%	31,159	27,875	12%

Diamonds – Production increased by 13% to 9.1 million carats, mainly attributable to the Debswana operations, with Jwaneng increasing production following the slope failure in 2012, and higher grades at Orapa. Production also increased in South Africa and Canada, on account of improved grades at Venetia and Snap Lake.

Production at Debswana increased by 17% compared to Q3 2013 with the return to operation of the Orapa One plant following unplanned maintenance in Q3. Production at Venetia improved significantly, up 57% on Q3, on account of higher volumes and grades following the recovery from pit flooding earlier in the year. The Canadian operations also showed increased production over Q3 2013, largely due to improved throughput and higher grade at Snap Lake.

EXPLORATION AND EVALUATION

Exploration and evaluation expenditure for Q4 2013 totalled \$166 million, a decrease of 19%. Total expenditure in 2013 totalled \$533 million, a decrease of 27%.

Exploration expenditure in Q4 2013 was \$63 million, a decrease of \$7 million as a result of reductions across most of the portfolio including, metallurgical coal, diamonds and iron ore. Total expenditure in 2013 totalled \$207 million, in line with 2012.

Evaluation expenditure for the quarter was \$103 million, a decrease of 23%, driven by reductions in copper and nickel and partially offset by increases in iron ore. Total expenditure in 2013 was \$326 million, a decrease of 38% driven by reductions in copper and nickel partially offset by an increase in De Beers following the acquisition of additional interest in 2012.

PRODUCTION SUMMARY

The figures below include the entire output of consolidated entities and the Group's attributable share of joint ventures, joint arrangements and associates where applicable, except for Collahuasi in the Copper segment and De Beers' joint ventures which are quoted on a 100% basis.

Iron Ore (tonnes)	Q4 2013	Q3 2013	Q2 2013	Q1 2013	Q4 2012	Q4 2013 vs. Q3 2013	Q4 2013 vs. Q4 2012	2013	2012	2013 vs. 2012

- (1) Saleable production
- (2) Production includes medium carbon ferro-manganese
- (3) Within export coking and export PCI coals there are different grades of coal with different weighted average prices compared to benchmark
- (4) Includes both hard coking coal and PCI sales volumes
- (5) Excludes Anglo American Platinum's copper production
- (6) ASCu = acid soluble copper
- (7) TCu = total copper
- (8) Anglo American's share of Collahuasi production is 44%
- (9) Anglo American previously held 74.5% of Anglo American Sur; as from 24 August 2012, it held 50.1%. Production is stated at 100% as Anglo American continues to consolidate Anglo American Sur
- (10) ICu = insoluble copper (total copper less acid soluble copper)
- (11) Difference between total copper production and attributable copper production arises from Anglo American's 44% interest in Collahuasi
- (12) Excludes Anglo American Platinum's nickel production
- (13) 2012 fertiliser production restated to reflect the change in production quantification methodology in the acidulation plant at Cubatão
- (14) Nickel and copper refined through third parties is now shown as production of nickel matte and copper matte. Nickel and copper matte, per the table, reflect matte sold to a third party in Q4 2013 from 2012 and 2013 production stockpiles
- (15) Equivalent refined is the mines' production and purchases of metal in concentrate, secondary metals and other metals converted to equivalent refined production using Anglo American Platinum Limited's standard smelting and refining recoveries
- (16) 4E: the grade measured as the combined content of the four most valuable precious metals: platinum, palladium, rhodium and gold.

<u>Note</u>: Production figures are sometimes more precise than the rounded numbers shown in the commentary of this report. The percentage change reflects the percentage change using the production figures shown in the Production Summary of this report.

<u>Forward-looking statements</u>: This release contains certain forward looking statements which involve risk and uncertainty because they relate to events and depend on circumstances that occur in the future. There are a number of factors that could cause actual results or developments to differ materially from those expressed or implied by these forward looking statements.

Notes to editors:

Anglo American is one of the world's largest mining companies, is headquartered in the UK and listed on the London and Johannesburg stock exchanges. Our portfolio of mining businesses meets our customers' changing needs and spans bulk commodities – iron ore and manganese, metallurgical coal and thermal coal; base metals and minerals – copper, nickel, niobium and phosphates; and precious metals and minerals – in which we are a global leader in both platinum and diamonds. At Anglo American, we are committed to working together with our stakeholders – our investors, our partners and our employees – to create sustainable value that makes a real difference, while upholding the highest standards of safety and responsibility across all our businesses and geographies. The company's mining operations, pipeline of growth projects and exploration activities span southern Africa, South America, Australia, North America, Asia and Europe.
